Studio Arish

Intelligent Payment Recovery

PayResolve AI

Presented By Arish Islam

- Agentic Banking
- Airwallex Sandbox Prototype

The Problem

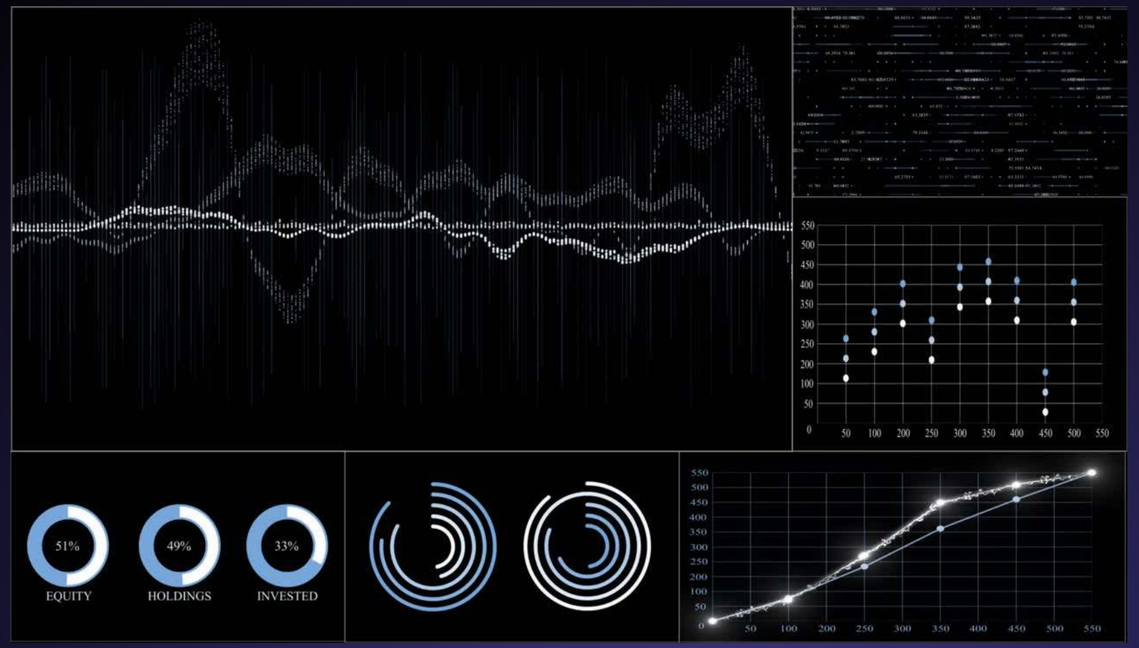

When Payments Fail, Every Decision Matters

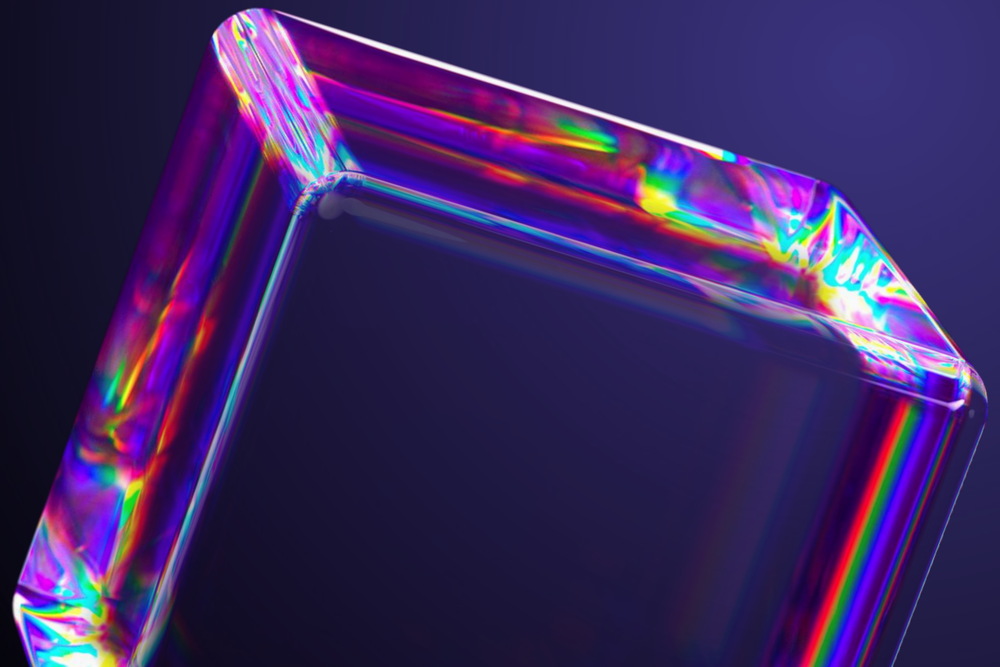

- Supplier transfers can fail or become delayed.
- Teams need to determine the actual payment status.
- Retrying too early can create duplicate-payment risk.

Our Solution

An AI Agent for Safer Payment Recovery

PayResolve AI monitors transfer states, checks failure conditions, coordinates replacement payments and maintains a traceable recovery workflow.

Studio Arish

How It Works

From Failure to Resolution

Monitor

Detect

Verify

Replace

Safety First

Recovery Without Duplicate Payments

Never retry based only on a timeout.

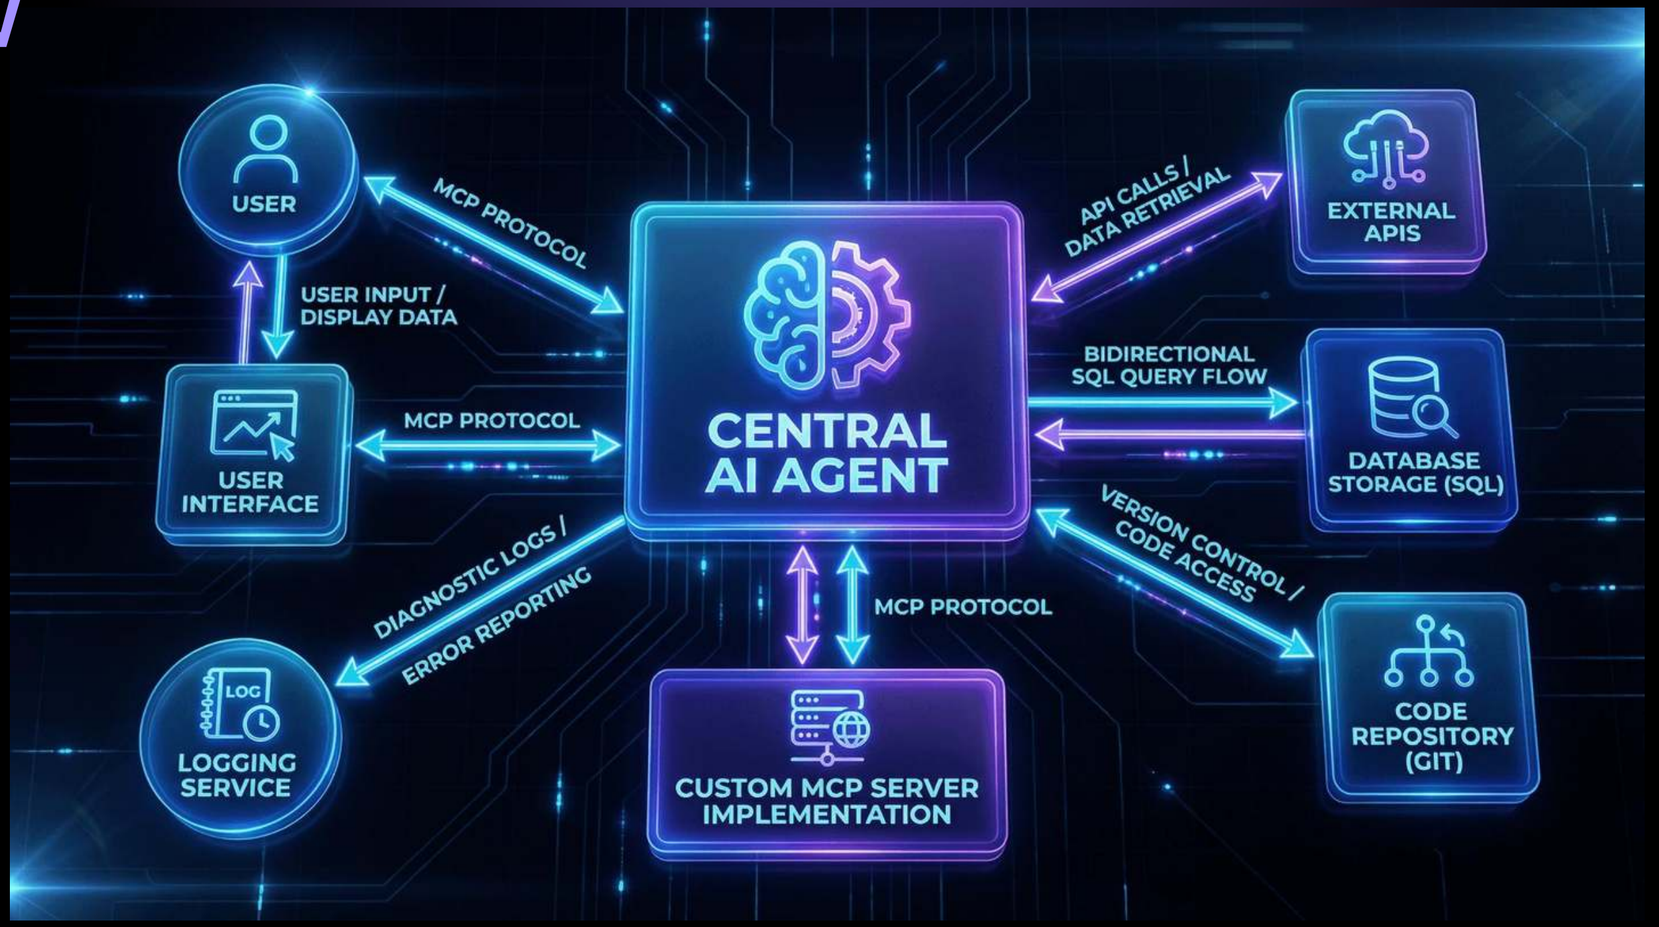

Use unique request IDs for separate transfers.

Require confirmed failure before replacement.

Escalate ambiguous states for review.

A Connected, Traceable Workflow

Measuring Success

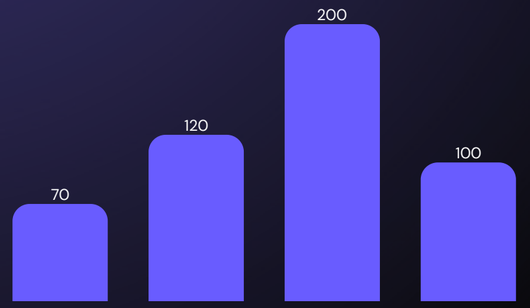

What We Aim to Improve

- Duplicate replacement rate
- Recovery completion rate
- Time to detect terminal failure
- Cases requiring human review
